

Table 1: Walking-skeleton results on shipped presets (t0-heisenberg-micro, t0-micro, t0-nc-micro, t0-qaoa-micro, t0-rc-micro, t0-smoke). MAE confidence intervals use a circuit-blocked bootstrap. Nominal and realized totals expose current budget inequality.

Method	Cells	Macro MAE [95% CI]	MAE IQR	Rank	Macro RMSE	Harm mean	OCR	B_{train}	B_{extra}	B_{pred}	Nominal total	Realized total	Test ratio	Eval./expect.
Raw	22	0.1578 [0.1415, 0.1770]	[0.0355, 0.2077]	2.14	0.1660	0.0000	0.000	0	0	80,896	80,896	80,896	1.0x	652.4
Ridge	22	0.0530 [0.0418, 0.0653]	[0.0213, 0.0750]	1.50	0.0652	0.0124	0.334	123,904	0	80,896	204,800	204,800	1.0x	652.4
Local digital ZNE	22	0.1065 [0.0904, 0.1235]	[0.0545, 0.1244]	2.36	0.1211	0.0265	0.433	0	161,792	80,896	80,896	242,688	3.0x	1957.2

Run artifacts: ff3f3de0b4ab, ebfc9f6f22d0, 689116c1bd7c, f7a671b3c9d5, 839b1b2829f7, ee6ff2f56fa4. Full cell identifiers and numeric provenance are in report-trace.json. These shipped presets do not yet implement the S0 to S6 grammar.
