

Table 1: Legacy-v1 walking-skeleton results. Run presets: t0-heisenberg-micro, t0-micro, t0-nc-micro, t0-qaoa-micro, t0-rc-micro, t0-smoke. MAE confidence intervals use a circuit-blocked bootstrap. Nominal and realized circuit-evaluation totals are reported; budgets are not equalized. The headline includes only continuous regression. Clifford controls are reported separately and excluded from all headline statistics and costs. Section: Continuous regression (headline).

Method	Cells	Macro	MAE [95% CI]	MAE IQR	Rank	Macro RMSE	Harm mean	OCR	B_{train}	B_{extra}	B_{pred}	Nominal total	Realized total	Test ratio	Eval./expect.
