

Table 1: Walking-skeleton results on shipped presets (t0-heisenberg-micro, t0-micro, t0-nc-micro, t0-qaoa-micro, t0-rc-micro, t0-smoke). MAE confidence intervals use a circuit-blocked bootstrap. Nominal and realized totals expose current budget inequality.

Method	Cells	Macro MAE [95% CI]	MAE IQR	Rank	Macro RMSE	Harm mean	OCR	B_{train}	B_{extra}	B_{pred}	Nominal total	Realized total	Test ratio	Eval./expect.
Raw	22	0.1578 [0.1409, 0.1776]	[0.0355, 0.2077]	2.14	0.1660	0.0000	0.000	0	0	80,896	80,896	80,896	1.0x	652.4
Ridge	22	0.0530 [0.0422, 0.0657]	[0.0213, 0.0750]	1.50	0.0652	0.0124	0.334	123,904	0	80,896	204,800	204,800	1.0x	652.4
Local digital ZNE	22	0.1065 [0.0905, 0.1237]	[0.0545, 0.1244]	2.36	0.1211	0.0265	0.433	0	161,792	80,896	80,896	242,688	3.0x	1957.2

Run artifacts: ebc4b7d806d1, 5544eb8e76b4, 8bd91b52602e, b0409e2a4d7b, 130260f4aac8, 3ca8ac5377e8. Full cell identifiers and numeric provenance are in `report-trace.json`. These shipped presets do not yet implement the S0 to S6 grammar.
